

# Fire Barrier Expansion Joint Systems

Architectural Products

**inpro**<sup>®</sup>

They're not just Expansion Joint Systems.

# They're masters of movement.

Acoustic authorities. Waterproofing warriors. Forbidders of Fire. Air and moisture mercenaries. They're on a mission to maintain the integrity of buildings in the face of earthquakes, hurricanes, fires and just plain everyday forces. Often the unsung heroes of building protection, they're built to do what they do every day because that's what it takes to keep people safe.

## why inpro<sup>®</sup>

Our Expansion Joint + Fire Barrier Systems are engineered to handle the unique conditions of your building.

## engineered obsessively

We constantly test and review our systems for continuous innovation to provide you with the best solutions. Yeah we're obsessed, but in a good way.

## protected by design

From ensuring smooth transitions for rolling equipment carts, gurneys and wheelchairs, to preventing the spread of smoke and fire, we integrate building protection right into the product's design.

## manufactured with care

As the manufacturer, we verify that only the best products are shipped out to your project.

# Model Number Guide

## Understanding product numbers

We've made it even easier for you to place the right system configuration in your next project. Just visit [inpro.com](http://inpro.com) to download our industry leading specifications which are adaptable and easy to work with...just like us!

### Series | Model

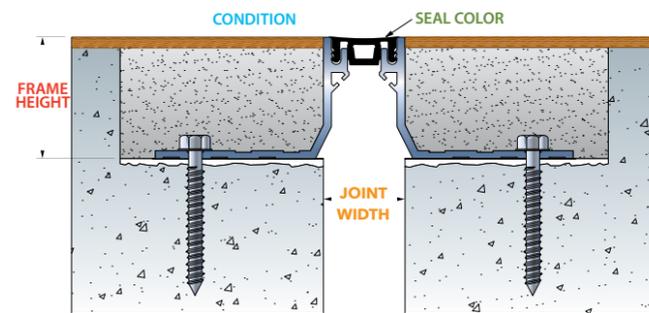

100	Elastomeric Seal Systems for Floors/Walls/Ceilings
200	Dual Elastomeric Seal Systems for Floors/Walls/Ceilings
300	Glide Plate Seismic Systems for Floors/Walls/Ceilings
400	Center Bar Seismic Systems for Floors/Walls/Ceilings
500	Seismic Systems for Floors
600	Exterior Seismic Systems for Walls and Roofs
700	Heavy Duty Seismic Systems for Floors
800	Cover Plate Systems for Floors / Walls / Ceilings
900	Fire Barrier Systems
1000	Exterior Compression Seals
1100	Foam Seals
1200	Silicone Foam Seals

### Condition

A01	Floor to Floor/Roof to Roof
A02	Floor to Wall/Roof to Wall
A07	Wall to Wall or Ceiling to Ceiling
A09	Wall to Corner or Ceiling to Wall
V18	Ceiling to Wall for Acoustical Ceiling Systems
V24	Ceiling to Ceiling for Acoustical Ceiling Systems

### Joint Width

025	1" (25mm)
038	1½" (38mm)
050	2" (51mm)
075	3" (76mm)
100	4" (102mm)
125	5" (125mm)
150	6" (152mm)
200	8" (203mm)
300	12" (305mm)
350	14" (356mm)
400	16" (406mm)
450	18" (457mm)
500	20" (508mm)
600	24" (600mm)

## Loading Definitions

Standard/Moderate/Heavy Duty are designations as they relate to load ratings. These are provided as a guideline to assist in making a preliminary product selection for a given application.

- "Standard" suggests use in common applications such as typical office settings or other spaces where pedestrian traffic or occasional rubber-wheeled traffic like mail carts and light-weight cleaning equipment, luggage, etc. is the norm.
- "Moderate" suggests applications where occasional heavier maintenance equipment with soft rubber tires (such as gurneys, light duty scissor lifts, motorized cleaning equipment, etc.) would be added to the standard traffic. The systems in this category are comprised of heavier aluminum extrusions, with thicker walled extruded rubber inserts.
- "Heavy Duty" is for applications where truly heavy loads (such as vehicles) or high-point loads (such as mobile medical equipment, coin carts, materials handling equipment, etc.) are the norm. They are capable of multi-directional movements and are also available in surface or blockout mounted variations.

With lives on the line  
**there's only one  
fire barrier you  
can trust.**

Fireline® Fire Barriers are the only products of their kind that took on the challenge to improve fire barriers and succeeded. When it comes to protecting your building and the people inside, we make it as easy as possible.

Achieve consistent and efficient installation with patented:

 Our Fireline® products are UL tested and approved. Visit our website for more information.

Fireline®  
Fire Barriers

# Fire Barriers

Building expansion joint and slab openings inherently create a pathway for fire and smoke to travel and spread throughout the structure. Inpro's broad array of Fire Barrier products provide protection for 1, 2, 3 and 4-hour rated conditions to keep the threat contained.

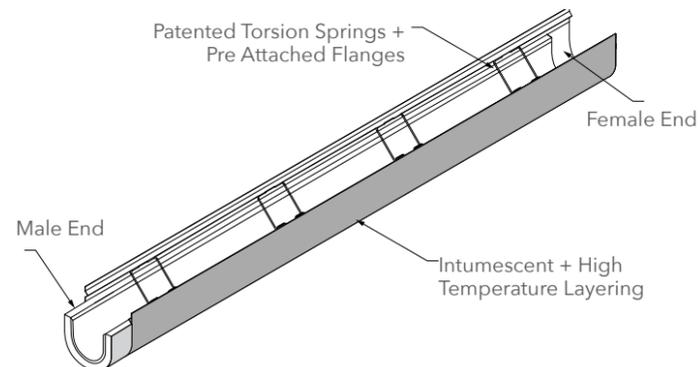

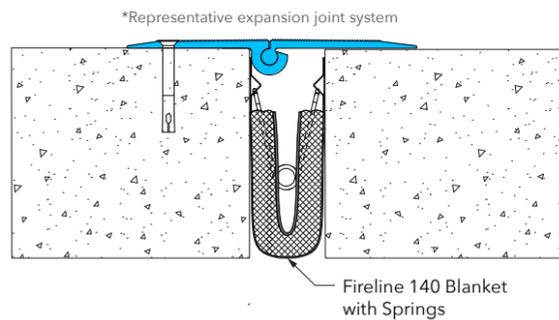

- **UL 2079** - Test for fire resistance of building joint systems.
- **ULC S-115** - Test for fire resistance of building joint systems for Canadian regulations.
- **EN 1366-4** - Fire Resistance test for Service Installations. Linear Joint Seals. (Equivalent to BS 476, Part 20). 120 minutes.
- Fireline products are accepted by many local Civil Defense authorities throughout Middle Eastern/GCC Countries. Contact your local Inpro representative for territory specific details.

Note: Tested product configurations vary by region. Please contact your regional Inpro office for more information.

## NEW! Fireline® 140 Fire Barrier

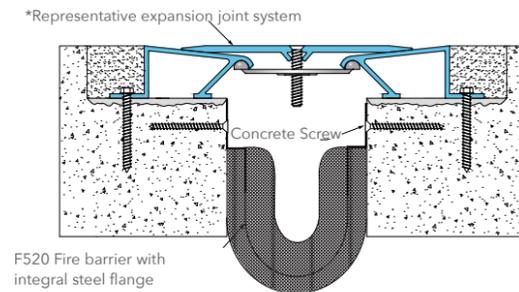

The first fire barrier of its kind, the Fireline® 140 requires no mechanical fastening. The 140 'springs' into action during installation utilizing our patented spring technology for consistent outward pressure.

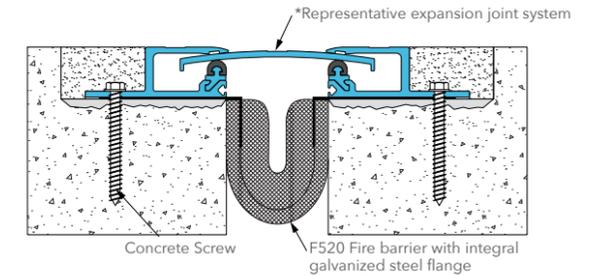

- System sold in 6 1/2' (2m) lengths.
- Accommodates floor and wall joints ranging 2-4" (50-100mm) in size.
- 50% +/- seismic movement rating
- Passive Fire barrier system for 1 and 2 Hr. Fire Ratings.
- Inside mount eases installation of any coverplate or chase wall system.
- Tested in accordance with:
  - UL 2079/ ULC S-115 "FTH" (FTH: Rating Fire, Temperature and Hose)
  - ASTM-E119/E1399/E1966

U.S. Pat. No. 9,745,597  
 Watch the Installation video on our YouTube page.

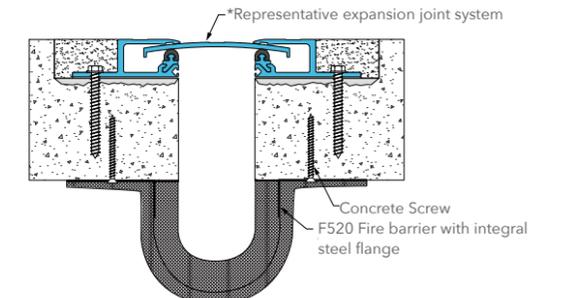

## v 520 Fire Blanket

Inside (Recessed) Mount - Floor to Floor (430-A01-100 System Shown)

Top (Flush) Mount - Floor to Floor (300-A01-100 System Shown)

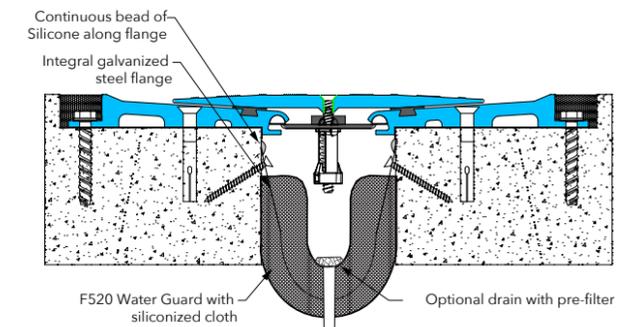

Bottom Mount - Wall to Wall (300-A01-100 System Shown)

Designed with installation in mind, the Fireline® 520 system installs 3x faster than other products on the market. This fire barrier installs with consistency and efficiency.

- Accommodates floor and wall joints from 6" (152mm) to 24" (610mm) wide.
- ± 80% movement.
- 1, 2 and 3 hour rated systems available.
- No fire caulk required at splices.
- Single sided installation.
- Mounting configurations available for both wall and floor conditions:
  - Top (flush) Mount
  - Low Profile (recessed) Mount
  - Bottom Mount
- Tested in accordance with: UL 2079/ ULC S-115 -ASTM-E119/E1399/E1966.
- View [inpro.com/patents](http://inpro.com/patents) to view our patents on the F520.

Watch the Installation video on our YouTube page.

## Fireline® Water Guard® Series

Fireline® Water Guard® Series systems are the only fire blankets with a US patented, UL 2079 rated waterproof design. The Water Guard® protects the integrity and performance of the fire barrier from extended exposure to the elements during construction.

- Straight 4 ft. (1.2M) sections for easy handling.
- 4" - 24" Joint Opening (101mm - 610mm).
- 1-3 Hour Fire Rating.
- Optional drain tube.
- Available in Top, Inside and Bottom Mount Designs.
- Water Guard Series U.S. Pat. No 8,397,453

## 990/995 Fire Rated Foam

- System sold in 6 1/2" sections (2M).
- Rated Foam offer 2 & 3 hour fire ratings in accordance with UL-2079 (ULCS115S).
- Rated Foams are impregnated with fire retardant materials during the manufacturing process. This alleviates the concerns that any damage to the silicone facing would compromise both the Rating and Waterproofing unlike other foams on the market.

- Foams can provide STC value of 54 for sound attenuation.
- Color options available.
- Foams can be applied to either vertical or horizontal applications.
- Available with Pick Resistant Sealant. Contact your representative for more information.

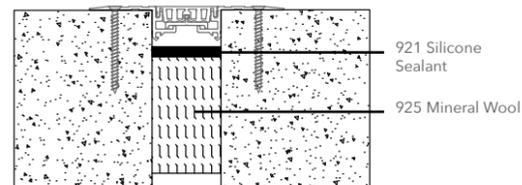

Ensure you specify the foam with the correct characteristics for your project.

- 990 foam meets thermal requirements of 25% +/- movement
- 995 Foam meets seismic characteristics of 50% +/- movement

## 925 Mineral Wool and Sealant Fire Barrier

- System for joint widths up to 3" (127mm).
- Mineral wool supplied in 4' (1.2m) lengths and compressed into gap for easy installation.
- System accommodates horizontal movement to 20%.
- Up to 3 hour rated meeting UL2079.
- Meets "Hose Stream Test" for masonry walls.

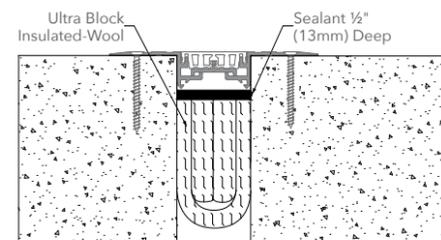

Reactofire Mineral Wool and Silicone Sealant Fire Barrier System (Optional)

2" (50mm) floor system shown  
(Applied to 106-A01 system)

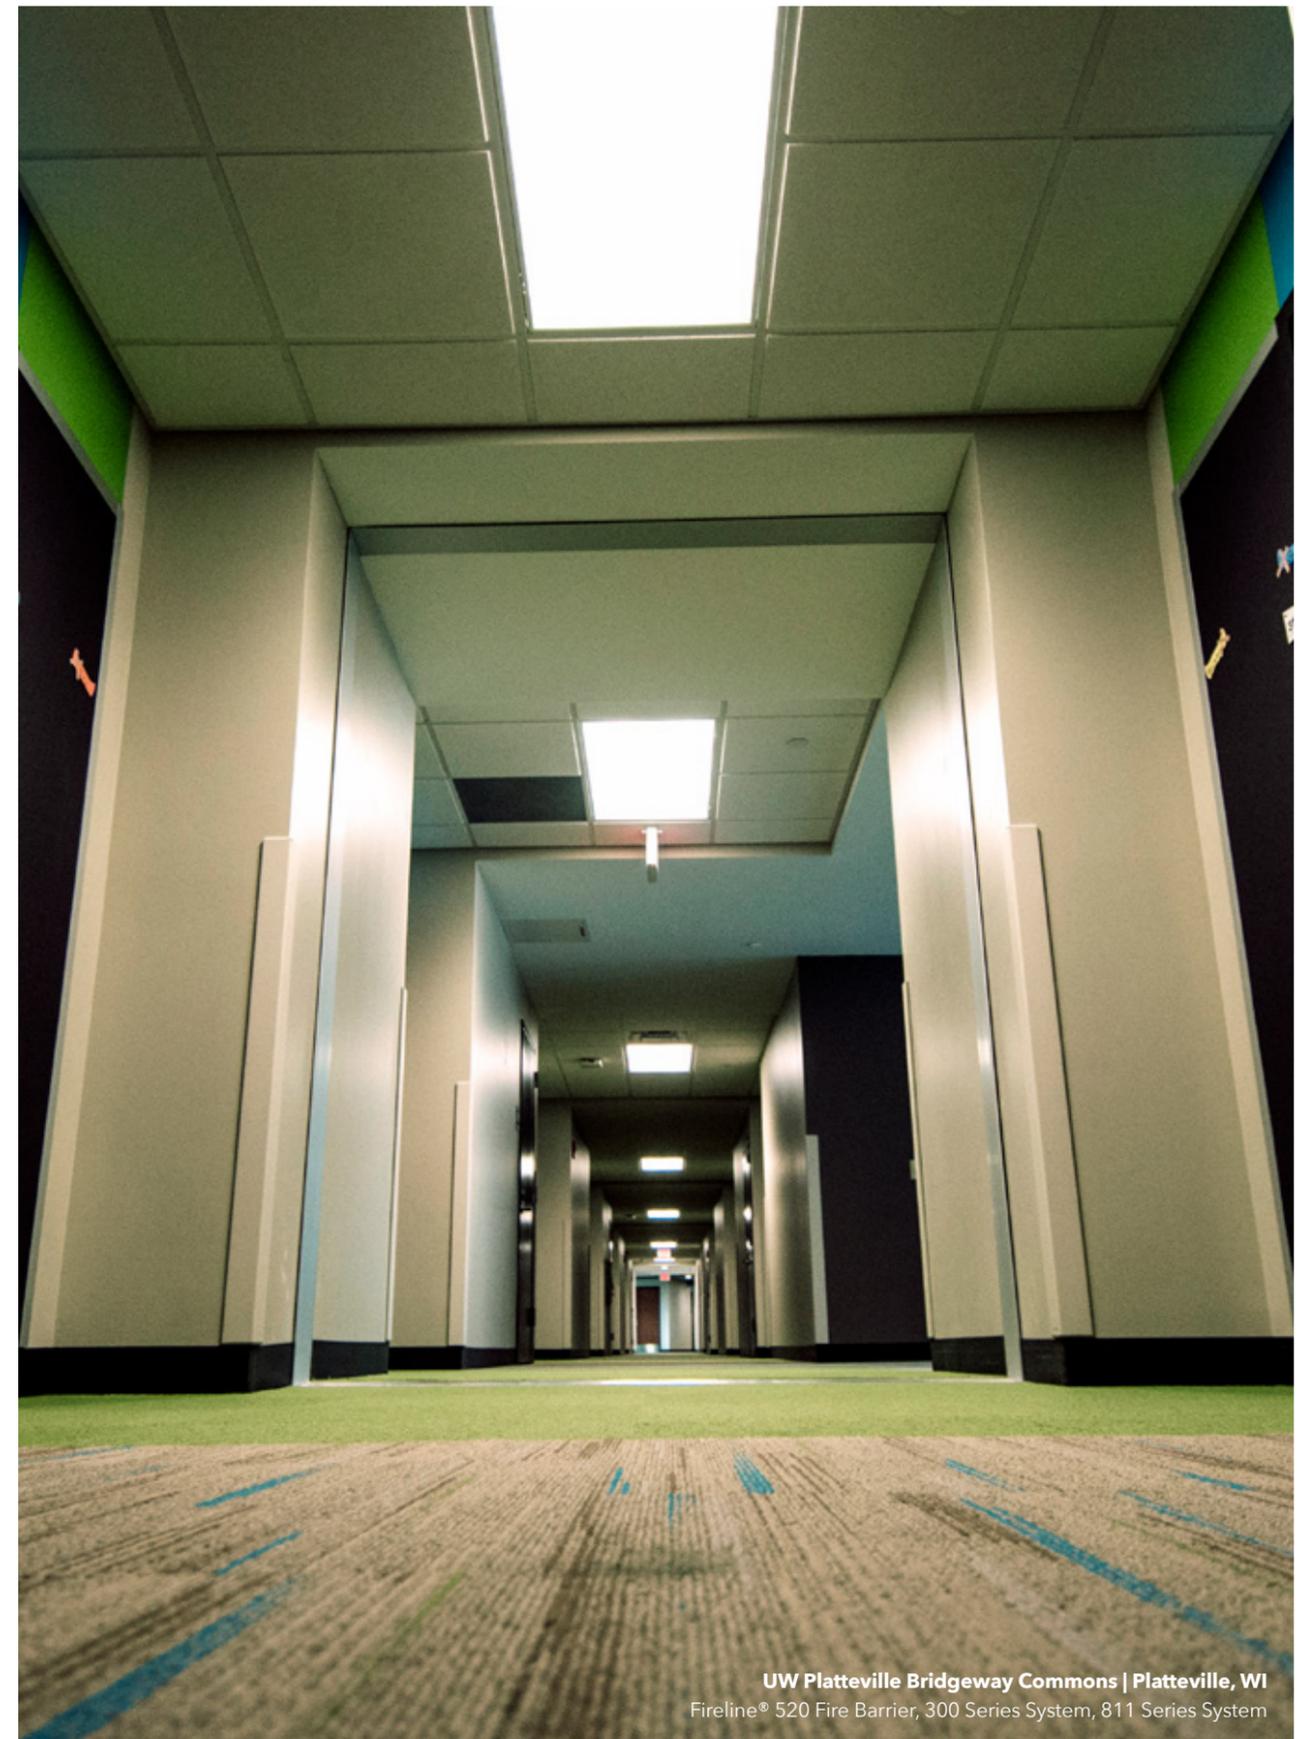

## 935 Mineral Wool and Sealant Fire Barrier

- System for joint widths up to 5" (127mm).
- System accommodates horizontal movement to 50%.
- Up to 4 hours rated meeting UL2079.
- Mineral wool supplied in linear foot lengths and compressed into gap for easy installation.
- Meets "Hose Stream Test" for masonry walls.
- Concrete installations only.

2" (50mm) floor system shown  
(Applied to 106-A01 system)

Fireline® 520 Fire Barrier, 300 Series System, 811 Series System

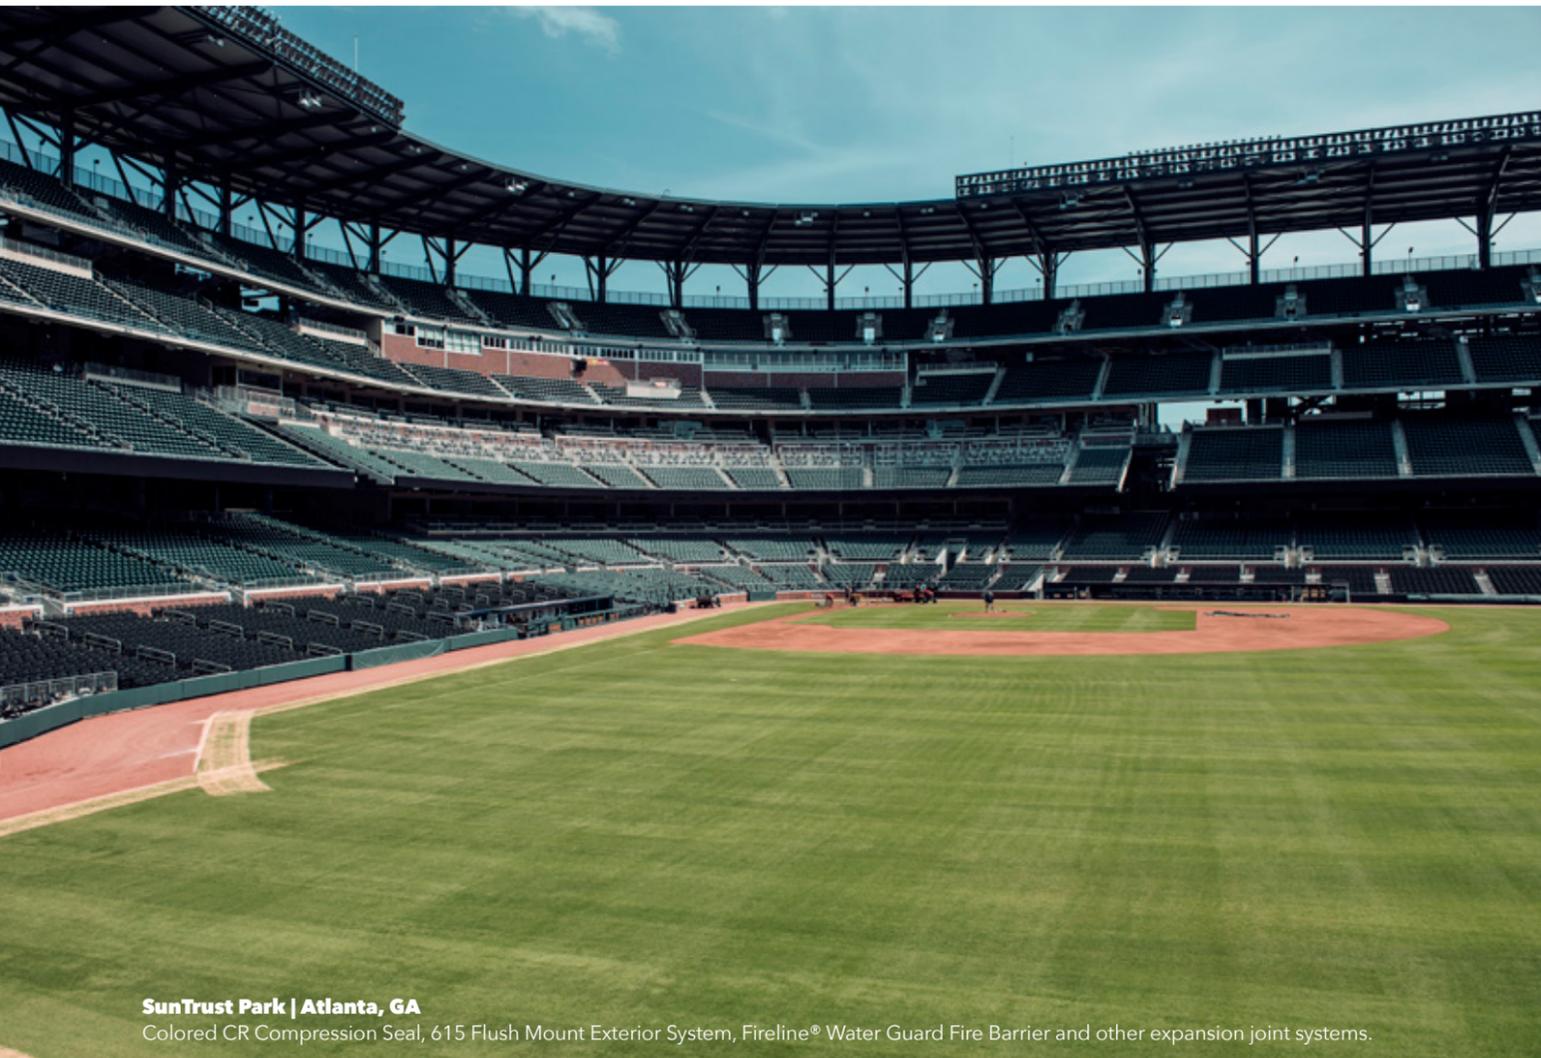

# Guard against the biggest threats to fire barriers.

## Threat 1: Water

One of the biggest obstacles with traditional fire barriers is that they can never get wet. Many times, fire blankets will arrive before the job site is ready for installation and it must sit out, exposed to the elements. With that type of exposure the barrier will have to be replaced because once the barrier is wet, it is destroyed...unless you're using Water Guard®.

Fireline® Water Guard® Series systems are the only fire blankets with a US patented, UL 2079 rated water proof design. The Water Guard® protects the integrity and performance of the fire barrier from extended exposure to the elements.

No need to worry if the fire barrier is installed for a few days, weeks or months before the building is enclosed. Water Guard® has been utilized in stadium projects where they were installed and exposed to the elements before cover-plate installation.

SunTrust Park | Atlanta, GA  
Colored CR Compression Seal, 615 Flush Mount Exterior System, Fireline® Water Guard Fire Barrier and other expansion joint systems.

## Threat 2: Poor Installation

A poor installation can result in gaps which will cause a chimney effect, allowing smoke and noxious fumes to spread. Fireline® reduces the margin of error with pre-attached metal flanges for drop-in installation and male/female splices.

Unlike other fire barriers, we've gone to extreme measures to ensure that installation is not only correct, but easy. All Fireline® fire barriers are engineered for one-step, drop-in installation saving time and money.

## How Fireline® Fire Barriers Make Installation Easier

Factory Fabricated Splices

Preassembled Transitions

Preattached, Integral Flanges for Drop-In Installation

## 5 Key Tips for Successful Fire Barrier Installation

1. A solid substrate free of voids is critical for securing the fire barrier in place.  
**This substrate MUST be of a UL-rated construction type.**
2. Consider the fire barrier as a complete system. Seams, changes in direction, and multi-layered systems are good places to check first.
3. Expansion joint covers matching the tested conditions are a required part of a complete system. Pursue judgments or align your specifications with manufacturers that have completed this for you.
4. Inspect test document or request test data when writing specifications to ensure your product can meet the project demands.
5. Provide separate details for rated conditions - do not utilize canned or boilerplate details that were not developed with barriers specifically in mind.

# Moisture Barriers

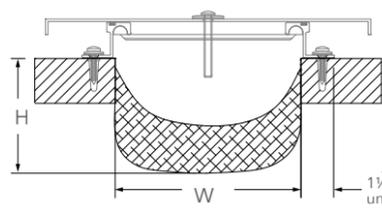

Moisture Barriers are designed to resist the penetration of moisture through wall, ceiling and floor assemblies of a structure. Inpro® Expansion Joint systems are designed to meet the challenges of keeping the elements where they belong: outside. Our membranes deter air currents and wind-driven rain to ensure the fire barrier stays dry.

## Standard Moisture Barrier

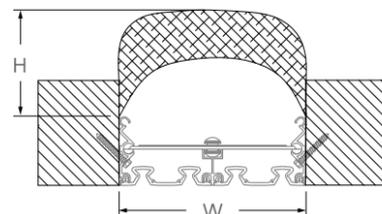

- High performance, fiber-reinforced EPDM membrane.
- Provided in conjunction with any exterior joints, also available as an additional feature to our complete line of products.
- Allows for joint movement matching the requirements of the architectural joint cover.
- Durable .045" (45mil) thick sheet good resists tearing, puncture and wear-through.
- Optional drain tube shown.

## Insulated Moisture Barrier

With EJ cover frames

With EJ cover frames

- Exterior grade system capable of matching 50% joint movement.
- Consists of fiber-reinforced EPDM membranes, sandwiching commercial grade insulation, adhered and pinned together to form a seismic-capable assembly.
- Maintains a minimum R-Value of 15.
- Seams and directional transitions designed to ensure a watertight seal and positive condensation drainage.
